

## Windows® 7:

# QA AND TESTING SERVICES

When it comes to performing an upgrade to Windows® 7, IT leadership must not only consider testing basic functionality, but also how the new system is configured, how it works with other systems and how well it supports business use. Frequently, however, IT leaders may lack true internal QA and Testing expertise. Others may have outdated test cases and inadequate test environments or be unable to apply a large capital expense toward the necessary testing tools.

By partnering with an experienced Quality Assurance (QA) and Testing services partner, organizations looking to deploy Windows® 7 can mitigate the inherent risks, maintain employee productivity and achieve the anticipated ROI.

## Why Choose TEKsystems QA & Testing Services

- ▶ **Proven Performance:** TEKsystems offers more than a decade of experience managing QA and Testing for multiple operating systems including Windows® 95, Windows® 98, Windows® 2000, Windows® XP and Windows® Vista. Our client list includes hundreds of companies from a wide range of industries, ensuring that we can tailor our expertise to match the unique needs of your IT environment.
- ▶ **Sound Processes / Methodology:** We utilize a risk-based approach to QA and Testing. Rather than spending money and time testing hundreds of applications, our methodology prioritizes test coverage of those applications that have the biggest impact to your organization. Additionally, we utilize tools, where appropriate, to automate key aspects of testing and provide better metrics around test execution, test management and defect tracking.
- ▶ **More Value:** TEKsystems offers a compatibility testing environment to minimize the risks associated with improper test environments and uncontrolled development environments. We are able to set up desktop configurations, retrieve applications, run test scripts and then re-run them on other versions. Moreover, we can leverage TEKsystems tool partnerships to provide term-based licensing for commercial testing tools. To further reduce costs, we also utilize our near-shore and off-shore delivery centers.

## About TEKsystems® QA & Testing Services

TEKsystems Quality Assurance (QA) and Testing practice helps clients realize the ROI of their applications initiatives by proactively mitigating risk through pragmatic approaches to software testing and process improvement. Our services are designed to ensure sufficient independence and objectivity throughout the QA and Testing process. Flexible enough to be delivered separately or in tandem with other service offerings, our QA and Testing offering spans three key areas: Software Testing, Process Improvement Consulting and Technology Consulting.

I was impressed with TEKsystems' ability to rapidly deliver effective performance testing services that met our needs and saved us money.
