5 Steps to Cultivating Digital Resilience in Your Business

- Identify the right people early.** Having the right stakeholders will help properly establish the business problem(s) and clearly define the expected improvements in business performance.
- Lead from the top.** Modernization efforts must be a strategic, business-led initiative. Your IT department is a key player, yes, but the transformation must be embraced and driven by the C-suite.
- Dispel notions of IT as a cost center.** IT isn't just about keeping the lights on. IT must harness technology to power the business and delight customers. Ensure your IT department is enabling the business to scale and grow and that they're delivering superb customer experiences.
- Engage a trusted partner.** Your technology partner should quickly hone in on the business problem you need to solve. They should harvest your experience, knowledge and wisdom about your customers, and then apply technology to move you to the next level in your performance.
- Plan for the unknown unknowns.** Evaluate the lessons learned during the pandemic. Put the data you collected to use by applying predictive analytics to foresee and anticipate future events so your business can respond.

"We're at a point in the maturity curve where companies realize they need to be more **forward looking** about the unknown unknowns and must **plan appropriately** around that data set."
