Data Powered: Using Microsoft BI to Tell a Clearer Data Story

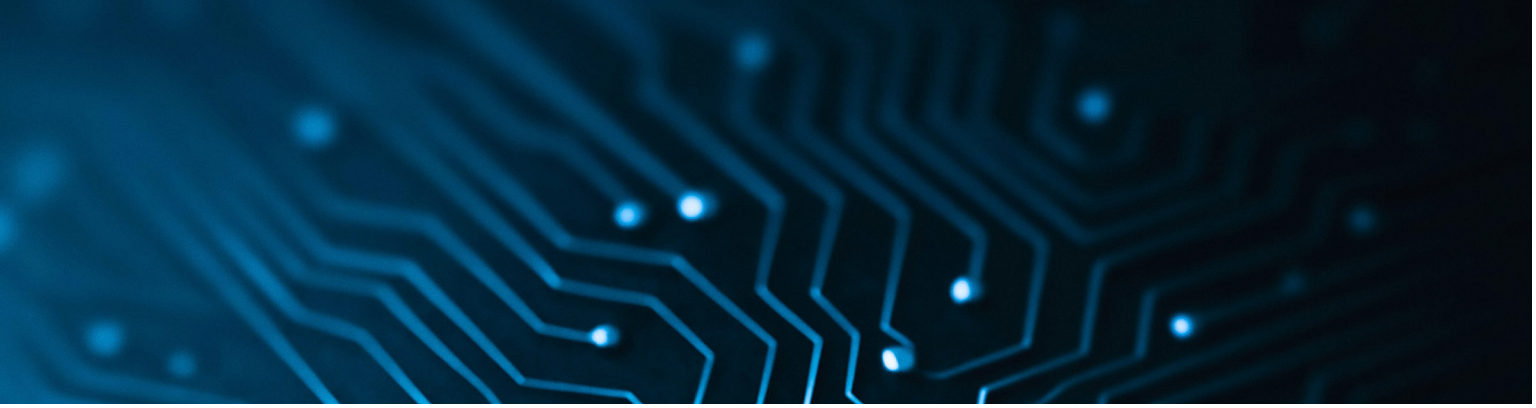

A leading manufacturing firm harnessed Microsoft BI to get more value from their data, access real-time insights and power better decision-making in just four weeks.

a story of **owning change**

Owning Change in Supply Chain

As a leader in automated material handling systems and technology solutions, our customer provides their end users with top-of-the-line solutions and insights to make informed business decisions and maximise results. To keep up with the rapid pace of change in today's business landscape, they're always looking for new ways to level up their enterprise business intelligence (BI).

What We Did

Data Analytics

Industry

Manufacturing and Logistics

The Challenge

Data That Delivers

Bringing Data Together for a Clearer Picture

Their ask was clear: provide end users with faster access to their data, and real-time reporting that aggregates and shows data in one place, instead of disparate systems and applications across the business. Microsoft Power BI fit the bill, but picking an enterprise application was just the first step.

Our Proposal

Insights, Fast-Tracked

Integrated Data Analytics for Performance at Scale

We partnered with our customer to implement Microsoft Power BI, integrate their multiple source systems, and optimise their performance at scale.

After just four weeks, end users were able to dive into data integrated from multiple applications and create specialised reports to drive insights.

From building custom interactive dashboards to exporting data analytics, the new reporting capability allowed our customer to accelerate action and view near real-time data to drive meaningful decisions.

Powerful Partnership

Powered by Data, Led with Agility

Adapting to Change for a Solution That Fits

As a top manufacturing company owning automation, our customer is the definition of agile. But operating with agility also means a lot can change during integration and implementation.

We worked side-by-side with them to navigate complexities, making adjustments in real time to maximise their BI investment.

We also supported their future-state design for their BI rollout. By delivering consulting and tailored training for their BI user community, we helped them chart a course for successful adoption, faster.

Real-World Results

With the implementation of Microsoft Power BI and integration of their data platforms, our customer delivers real-time BI to its end users. That informed decisioning and continuous, sustainable improvement allows them to get a clearer, more actionable story from their data.

The new reporting capabilities have empowered their enterprise to retrieve, analyse, and share data, which ultimately helps their customers achieve maximum productivity.
